POWERED BY

The Switzerland Innovation Mobility Conference brings together decision-makers and C-level executives to explore the future of mobility. Across systems, industries, and regions, we dive into the most pressing challenges and innovative trends – and discuss how to integrate them into tomorrow's infrastructure and society.

Participants will gain insights into:

The current state of pilot projects in Switzerland and worldwide

Exclusive best practices and innovations from across industries

Strategies to think mobility holistically and solve real-world challenges

Clear perspectives on preparing for an AI-driven mobility future

The conference is part of the broader efforts of the Innovation Booster New Mobility Lab, Switzerland's national initiative to drive innovation and collaboration in the mobility sector.

Together, we will explore the political, economic, and social transformations needed to move mobility forward – breaking down silos and shaping the future collaboratively.
